# THE CONCEPT

BY BIRDS INFINITY

Best of all, players already know and love 'Abgry Birds'. They already have an emotional connection to these characters. This means we're not just offering a new game, but an experience that players already know they'll love.

With multiplier bonuses per round, intuitive interface and world-renowned and loved gameplay, Birds Infinity has the potential to break the bubble and be a success.

[gameerz.com](http://gameerz.com)

# TECHNOLOGY AND IMPROVEMENTS

Over the past five months, we have carried out a complete transformation of the game, implementing improved challenges and gameplay algorithms that allow for equitable sharing of prizes.

We strengthen security with a 2048-bit **encrypted API**, a dedicated data server, **buffering** systems, and an **anti-cheat engine**.

These improvements are designed to take the user experience to a new level and ensure the integrity of the game.

# LICENCES

## GAMEERZ

When purchasing a license, you will be included in the global matrix of your purchased license in the system, which will allow you to participate in the profit sharing of all licenses sold worldwide in that matrix you purchased. This performance will occur in levels, reaching up to a 30% division into 4 levels of depth in a maximum of 120 licenses in the matrix. After reaching this limit, a new license will need to be allocated in the matrix to continue gaining in the division.

## VALUE OF LICENSES

Purchased licenses are converted into 100% balance, allowing you to play or transfer them to other users on the platform.

## MATRIX

The distribution of Gameerz licenses follows a left-to-right filling pattern and entry order.

First, we fill the first position of each license at the designated level, then the second position, and finally the third position, corresponding to license purchases. This fill pattern will be applied to all subsequent levels after completing the previous level.

# GLOBAL MATRIX

# RESIDUAL

**GET FROM 5% UP TO 10%**

At each level of the Matrix, for each license acquired in a total of 30%.  
This occurs by indirect overflow until the matrix is completely filled.
